Safire Software LPR City

Security Radar

Safire's security radar uses microwave technology to pinpoint the location and path of movement of up to 32 intruders with the highest precision, even in adverse weather conditions. Safire's radar is ideal for protecting large spaces where the environment is too complex to be implemented only with video surveillance cameras. The radar can also connect with up to 4 PTZs at the same time in such a way that a real-time visual monitoring will be carried out in case of intrusion and in this way the event recording will be obtained for later verification.

- Safire Link
- Custom software for LPR
- Up to 20 cameras LPR
- Action on external barriers
- Import / Export black and white lists
- Customization with logos / colors

Technical Specification

Tipo	Software
Capacity	Up to 20 LPR Cameras (Expandable)
Features	Action on external barriers Import / Export of black and white lists, custom reports / reports License plate distribution on map, with POP-UP warning in case of alarm
Installation	PC Windows
