PC Workstation Connectivity for Fire Alarm Network

DESCRIPTION

This professional-grade graphics system will complement the new generation of fire alarm control panels, while also being backward-compatible with the current analog product.

detection, and automatically switches to an area where a fire device has been activated to allow immediate viewing and investigation of an event. It also displays the relevant emergency assembly and fire control points.

2D graphic map and a separate screen for system management. It also reports any configuration errors, ensuring that the graphics system is maintained and updated whenever the panel configuration is revised.

STANDARD FEATURES

- Supports dual screens, allowing a dedicated screen for the 2D location images and a separate screen for listing active events and system management
- Reports configuration mismatch errors – ensuring that the graphics system is properly maintained and updated whenever there are any panel configuration revisions
- Powerful event log filtering and reporting
- Manage the state of the fire system using a combination of graphical images and system controls
- Programmable macro buttons to perform panel control operations
- Full map navigation using configurable buttons or map areas
- Device analog value reporting
- Perform device and zone disablements / enablements
- Operate and restore loop output devices for testing purposes
